The Innovator's DNA Jeff Dyer, Hal Gregersen, Clayton M. Christensen, 2011-07-12 A new classic, cited by leaders and media around the globe as a highly recommended read for anyone interested in innovation. In *The Innovator's DNA*, authors Jeffrey Dyer, Hal Gregersen, and bestselling author Clayton Christensen (*The Innovator's Dilemma*, *The Innovator's Solution*, *How Will You Measure Your Life?*) build on what we know about disruptive innovation to show how individuals can develop the skills necessary to move progressively from idea to impact. By identifying behaviors of the world's best innovators—from leaders at Amazon and Apple to those at Google, Skype, and Virgin Group—the authors outline five discovery skills that distinguish innovative entrepreneurs and executives from ordinary managers: Associating, Questioning, Observing, Networking, and Experimenting. Once you master these competencies (the authors provide a self-assessment for rating your own innovator's DNA), the authors explain how to generate ideas, collaborate to implement them, and build innovation skills throughout the organization to result in a competitive edge. This innovation advantage will translate into a premium in your company's stock price—an innovation premium—which is possible only by building the code for innovation right into your organization's people, processes, and guiding philosophies. Practical and provocative, *The Innovator's DNA* is an essential resource for individuals and teams who want to strengthen their innovative prowess.

Understand them, and you can create extraordinary growth. Ignore them, and you run the risk of becoming another statistic. It's become almost cliché: 8 out of every 10 new ventures fail. Of the ones that succeed, how many truly thrive-for the long run? And of those that thrive, how many continually overcome their growth hurdles ... and ultimately scale, with meaning, purpose, and profitability? The answer, sadly, is not many. Author Lex Sisney is on a mission to change that picture. After more than a decade spent leading and coaching high-growth technology companies, Lex discovered that the companies that thrive do so in accordance with 6 Laws - universal principles that govern the success or failure of every individual, team, and organization.

How Will You Measure Your Life? (Harvard Business Review Classics) Clayton M. Christensen, 2017-01-17 In the spring of 2010, Harvard Business School’s graduating class asked HBS professor Clay Christensen to address them—but not on how to apply his principles and thinking to their post-HBS careers. The students wanted to know how to apply his wisdom to their personal lives. He shared with them a set of guidelines that have helped him find meaning in his own life, which led to this now-classic article. Although Christensen’s thinking is rooted in his deep religious faith, these are strategies anyone can use. Since 1922, Harvard Business Review has been a leading source of breakthrough ideas in management practice. The Harvard Business Review Classics series now offers you the opportunity to make these seminal pieces a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world.

Radical Candor Kim Scott, 2017-03-23 Featuring a new preface, afterword and Radically Candid Performance Review Bonus Chapter, the fully revised & updated edition of Radical Candor is packed with even more guidance to help you improve your relationships at work. 'Reading Radical Candor will help you build, lead, and inspire teams to do the best work of their lives.' - Sheryl Sandberg, author of Lean In. If you don't have anything nice to say then don't say anything at all . . . right?

While this advice may work for home life, as Kim Scott has seen first hand, it is a disaster when adopted by managers in the work place. Scott earned her stripes as a highly successful manager at Google before moving to Apple where she developed a class on optimal management. *Radical Candor* draws directly on her experiences at these cutting edge companies to reveal a new approach to effective management that delivers huge success by inspiring teams to work better together by embracing fierce conversations. *Radical Candor* is the sweet spot between managers who are obnoxiously aggressive on the one side and ruinously empathetic on the other. It is about providing guidance, which involves a mix of praise as well as criticism - delivered to produce better results and help your employees develop their skills and increase success. Great bosses have a strong relationship with their employees, and Scott has identified three simple principles for building better relationships with your employees: make it personal, get stuff done, and understand why it matters. *Radical Candor* offers a guide to those bewildered or exhausted by management, written for bosses and those who manage bosses. Drawing on years of first-hand experience, and distilled clearly to give practical advice to the reader, *Radical Candor* shows you how to be successful while retaining your integrity and humanity. *Radical Candor* is the perfect handbook for those who are looking to find meaning in their job and create an environment where people love both their work and their colleagues, and are motivated to strive to ever greater success.

AVENUE21. Planning and Policy Considerations for an Age of Automated Mobility Mathias Mitteregger, Emilia M. Bruck, Aggelos Soteropoulos, Andrea Stickler, Martin Berger, Jens S. Dangschat, Rudolf Scheuven, Ian Banerjee, 2023-03-29

The subject of this open-access publication is the impact of connected and automated vehicles on the European city and the conditions under which this technology can make a positive contribution to urban development. The authors put forward two theses that have received little attention in the scientific discourse so far: Connected and automated vehicles will not become fully established in all sub-areas of the city for a long time. As a result, previously assumed effects - from traffic safety to traffic performance as well as spatial effects - will have to be reevaluated. To ensure a positive contribution of this technology to the mobility of the future, transport and settlement policy regulations must be further developed. Established territorial, institutional and organizational boundaries need to be challenged in a timely manner. Despite or because of the existing great uncertainties, we are at the beginning of a phase of yet shaping the possible future - in technology development, but also in politics, urban planning, administration and civil society. Description of the chapters: 1. Connected and automated driving: The long level 4 Mathias Mitteregger reflects on the road ahead for automated driving. What pathways of technological development induce which kind of spatial effects and planning needs? 2. Connected and automated driving: Consideration of the local, spatial context and spatial differentiation Emilia M. Bruck and Aggelos Soteropoulos reflect on the importance of the local context when classifying and estimating the effects of different forms of automated mobility. 3. Connected and automated driving in the context of a sustainable transport and mobility transformation Andrea Stickler, Jens

S. Dangschat and Ian Banerjee integrate possible potentials of automated mobility in the context of a transformed, sustainable transport system. PART I: Mobility and transport 4. Self-driving turnaround or automotive continuity? Reflections on technology, innovation and social change Katharina Manderscheid reflects on how differing visions of an automated future can be understood with regard to divergent interests in technological development. 5. Automated drivability and streetscape compatibility in the urban-rural continuum using the example of Greater Vienna Aggelos Soteropoulos analyses how different street spaces align with technological requirements of automated mobility, creating a suitability framework for road spaces in the Greater Vienna region. 6. Automation, public transport and Mobility as a Service: Experience from tests with automated shuttle buses The authors show what types of automated public transport might be used in the future and what can be learned from testing automated shuttle buses in the past. 7. Delivery robots as a solution for the last mile in the city? Bert Leerkamp, Aggelos Soteropoulos and Martin Berger describe how automated delivery robots could be contextualized in terms of solving last-mile problems and discuss what implications might lie ahead for urban planning. PART II: Public space 8. Control and design of spatial mobility interfaces The authors identify the possible implications of automated mobility for mobility interfaces and explore how public spaces could be transformed. 9. Transformations of European public spaces with AVs Robert Martin, Emilia M. Bruck and Aggelos Soteropoulos use the example of Copenhagen to show how public spaces could be transformed in an age of automated urban mobility and benefit from lower car dependency. 10. At the end of the road: Total safety Mathias Mitteregger discusses how the desire for road safety affects public spaces and how automated mobility influences this discourse. 11. Integration of cycling into future urban transport structures with connected and automated vehicles Looking at the future of mobility, Lutz Eichholz and Detlef Kurth show that the bike actually offers solutions to many of our current problems and that planning should not forget to integrate cycling into future urban transport structures and systems. 12. Against the driverless city Steven Fleming argues for a radical shift in cities towards a highly improved cycling infrastructure eradicating the need for automated mobility. Part III: Spatial development 13. Strategic spatial planning, “smart shrinking” and the deployment of CAVs in rural Japan Ian Banerjee and Tomoyuki Furutani show where automated mobility could help tackle pressing issues in rural Japan. 14. Integrated strategic planning approaches to automated transport in the context of the mobility transformation The authors show how new forms of automated mobility could be integrated into mobility systems in diverse spatial structures in the city region of Vienna with the overriding goal of the mobility transformation. 15. Opportunities from past mistakes: Land potential en route to an automated mobility system Looking at the mistakes made in building a car-centric environment in the past, Mathias Mitteregger and Aggelos Soteropoulos identify future areas of urban transformation as a result of a lower demand for car-centric infrastructures and businesses. Part IV: Governance 16. New governance concepts for digitalization: Challenges and potentials Alexander Hamedinger contextualizes the manifold paths towards an automated future with regard to governance

and describes how governance concepts might need to adapt in the future. 17. How are automated vehicles driving spatial development in Switzerland? Fabienne Perret and Christof Abegg show how automated vehicles are influencing spatial development in Switzerland, focusing on three different scenarios on the road ahead. 18. Lessons from local transport transition projects for connected and automated transport Andrea Stickler looks at local projects aiming at a transformation of mobility practices and reflects on implications for automated transport. 19. Connected and automated transport in the socio-technical transition Jens S. Dangschat looks at societal transformations in the past and contextualizes automated mobility in terms of a possible socio-technical transition ahead. 20. Data-driven urbanism, digital platforms and the planning of MaaS in times of deep uncertainty: What does it mean for CAVs? Ian Banerjee, Peraphan Jittrapirom and Jens S. Dangschat show how continuous digitalization in cities might affect possible uses and implementations of CAVs and their accompanying systems.
